

Title	C2F: GetInvoice returns 500 after oracle-pool callback
Severity	Critical
Priority	High
Status	Open
Environment	dev / payment-invoices

Description

After receiving an oracle-pool callback, the GetInvoice endpoint returns a 500 Internal Server Error instead of a valid invoice object.

Steps to Reproduce

#	Step
1	Create invoice via <code>PaymentInvoicesService.CreateInvoice (pending.awaiting_crypto_deposit)</code>
2	Verify GetInvoice works before callback
3	Send POST <code>/v1/callbacks/oracle-pool (status=1, confirmations=1)</code>
4	Call GetInvoice with same invoice_id

Actual Result

GetInvoice returns 500 Internal Server Error.

Screenshot: <https://prnt.sc/ST4eY-Q1waqM>

Expected Result

GetInvoice should return a valid invoice object (e.g., `pending.awaiting_checks` / `pending.awaiting_exchange` / `expired`).

Additional Information

Example invoice_id: `aea05b95-2e24-4ec8-a4f1-942c3106104b`
