

Title	Infura/Alchemy Polygon provider returns malformed block data - DeserError on BlockTransactions
Severity	Critical
Priority	High
Status	Open
Environment	Polygon RPC (Infura, Alchemy, GetBlock)

Description

Polygon RPC providers (Infura, Alchemy, GetBlock) intermittently return block data that fails deserialization with: DeserError { err: Error("data did not match any variant of untagged enum BlockTransactions") }. Likely caused by post-Cancun blob transactions (EIP-4844).

Steps to Reproduce

#	Step
1	Connect to Polygon RPC via Infura or Alchemy
2	Request block via eth_getBlockByNumber
3	Attempt to deserialize BlockTransactions
4	Observe intermittent DeserError

Actual Result

Deserialization fails with DeserError, RPC backend skips affected blocks.

Expected Result

Block data should deserialize correctly including EIP-4844 blob transactions.

Additional Information

Etherscan backend acts as fallback and processes blocks correctly.
